

DRIVEABLE

Driving Skills Can Change

A good driver is able to observe and process information while they drive. Cognitive skills like memory, attention, and judgment, allow them to drive safely. However, the cognitive skills required for driving can be impacted by many things. Have you been concerned with yourself or a loved one behind the wheel? Mature drivers bring a wealth of experience to the driver’s seat, but it is important to know when to stop driving.

Please check any of the following that apply to you, or to a loved one. Then, please feel free to enjoy this word search, finding the highlighted words from this list.

If three or more apply, please speak to your doctor about a DriveABLE assessment.

- I find it difficult to **MERGE** on a busy highway.

DRIVEABLE

DriveABLE is an unbiased and objective assessment that fairly and accurately determines when driving has declined to an unsafe level due to a medical condition or medication.

Drivers who lack insight into their driving difficulties can strongly resist attempts to have them stop driving. The best way to know if someone is safe to drive is to have a fair and accurate driving assessment.

DriveABLE seeks to protect safe drivers from misidentification, based solely on their medical condition or age, and accurately identify unsafe drivers to protect them, their families and other road users.

Your local provider of DriveABLE assessments is:

702 Platinum Ave.
Cody., WY 82414
P 307.578.1985
F 307.578.1938
